Introduction to Development Modules 👋🏼

Welcome to the AI Automation Crash Course section of Solution Sorcery!

By this point you've already learned how AI can transform businesses, explored the AI solution landscape, and become familiar with our resources and solution database. Now it's time to take the next step - learning how to actually build AI solutions yourself.

The Morningside Vision 🌟

Before we dive in, I want to share something important about this module. The content you're about to consume is part of the Morningside Group's broader vision of creating a world where the benefits of the AI revolution are distributed as fairly as possible.

We believe that basic AI skills are a right for all people - enabling them to improve their lives, build better businesses, become smarter, and learn more. This is about putting power back in the hands of individuals.

Content Sources and Format 📚

Because of this mission, the content you'll see comes from various sources. Some of it is from my YouTube channel, some is created specifically for the Accelerator, some will be from Accelerator members, and some comes from other educational initiatives we've developed. You may notice different formats and styles throughout - that's intentional. We've brought together the best resources to give you a comprehensive learning experience.

Much of this content is also available on YouTube in slightly different formats and can be found in my free course on Skool as well. This isn't exclusive to the Accelerator - it's part of our broader commitment to upskilling people in AI.

Navigating Rapid Change in AI Tools 🔄

One important note: because some of this content exists in multiple places and the AI landscape moves incredibly fast, you may encounter tutorials that have become partially outdated, e.g. the UI has changed slightly from the version in the video. I suggest always starting with the most recent content when possible.

If a tutorial is several months old or more, it's highly likely that some aspects won't work exactly as they did initially, and you'll need to apply a bit of old fashioned problem-solving to work around these changes. This is actually a valuable part of the learning process in such a rapidly evolving field. More on this in the next video.

Setting Clear Expectations 🎯

Now, I want to be very clear about what Solution Sorcery is designed to accomplish. Remember earlier in the program when we discussed the different types of AI Automation Agency owners? This is not designed to turn you into an "AI Solution Wizard" overnight.

Our Three Core Goals 🎯

Our goal here is threefold:

1. **Familiarity with core tools** - Understanding what tools exist, how they connect together, and their basic functionality
2. **Hands-on experience** - Building some fundamental AI systems so you understand the process and components
3. **Development basics** - Learning enough about software development to speak the language and understand what's possible

Who This Is Designed For 👥

This module is designed primarily for the "Surface Level Operator" and the "Tinkerer" paths. You'll gain enough knowledge to understand how these systems work, communicate effectively with clients about AI solutions, and even build basic prototypes or MVPs.

What This Is Not ⛔

However, this is not a comprehensive development bootcamp. This is a business accelerator program. We're not trying to turn you into a professional developer who can personally build production-grade solutions for enterprise clients. That would require months or years of dedicated practice.

The Knowledge You Need to Succeed 🧠

The good news? You don't need to become a development expert to run a successful AI Automation Agency. What you need is enough knowledge to:

- Understand what's possible and what's not
- Know roughly how a certain result can be achieved with the current AI automation tools
- Create basic prototypes to demonstrate concepts
- Know where to find development talent when needed
- Communicate effectively with developers

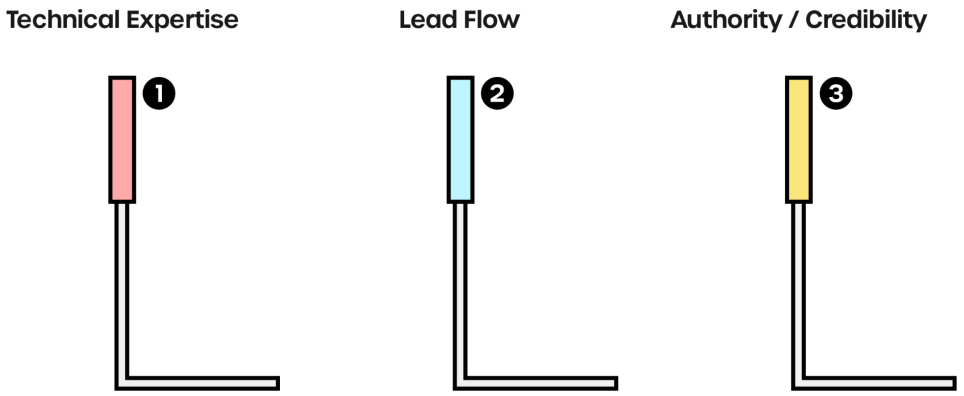
Clearing the Technical Hurdle 🏃

After completing the rest of Solution Sorcery, you'll have a significant knowledge advantage over most business owners, making you immediately valuable. Remember the three hurdles? This is designed to get you over the first hurdle of needing technical expertise.



Combined with what you've already learned in this program, you'll understand the technology well enough to identify opportunities, explain solutions, and either build simple implementations yourself or hand off to developers who can build more complex systems.

My Personal Approach 🧠

Remember, many successful agency owners aren't genius developers themselves - they're strategists and communicators who know how to connect business problems with technical solutions.

While you may know me as someone who can build AI automations based on what I do on YouTube, I have only ever delivered ONE Morningside project myself, and that was the very first time we tested botpress for delivering a chatbot, so it barely counts. That project was the start of all of this, and since then I have built a team around me to do the delivery but I still can understand what is being done from a high level.

The coming modules will give you the foundation to do the same. So let's dive in with realistic expectations and focus on building that crucial foundation of knowledge that will set you apart in the AI solutions marketplace.
